Program Specification and Test Cases

1. Program Specification

Input: Triple of day, month, and year

Input ranges:

1 <= month <= 12

1 <= day <= 31

1900 <= year <= 2015

Output: Previous date or "Invalid date"

2. Test Suite

2.1 Equivalence Partitioning

Valid Partitions:

- **Typical Days:** Any date that is not the start or end of a month or year.
- **End of a Month:** The final date of any month, except when it marks the end of a year.
- **End of a Year:** The last day of December.
- **Leap Year Special Case:** February 29, which only occurs in leap years.

Invalid Partitions:

- **Out-of-Range Month:** Months less than 1 or greater than 12.
- **Out-of-Range Day:** Days less than 1 or greater than the maximum allowed days for a given month.
- **Out-of-Range Year:** Years before 1900 or after 2015.
- **Incorrect Days for a Specific Month:** Days that do not fit within the typical range for a month (e.g., February having more than 29 days).

2.2 Boundary Value Analysis

- First day of year: January 1, YYYY
- Last day of year: December 31, YYYY
- First day of month: DD 1, MM
- Last day of month: DD 30/31, MM (28/29 for February)
- Minimum valid year: 1900
- Maximum valid year: 2015
